

Availability

Extensive stocks are held to ensure prompt delivery, reducing our customer's inventory costs and meeting those unforeseen emergencies. We feel that this service is important to our customers, whether OEM, Distributor, System Houses or End user. With over 90% of orders being required on a next day basis the company objective is highly focused on prompt delivery irrespective of destination.

Sprint Electric World-Wide

Local service is often a key to customer satisfaction, where the product is just an element, albeit important, of the customer requirements. Worldwide a network of specialist companies meet customer requirements from the straight forward supply of a single drive module to the full design and integration of a complex system. These "local" companies provide rapid response and excellent technical back up where and when it's needed.

DC Drives 50w - 500kw

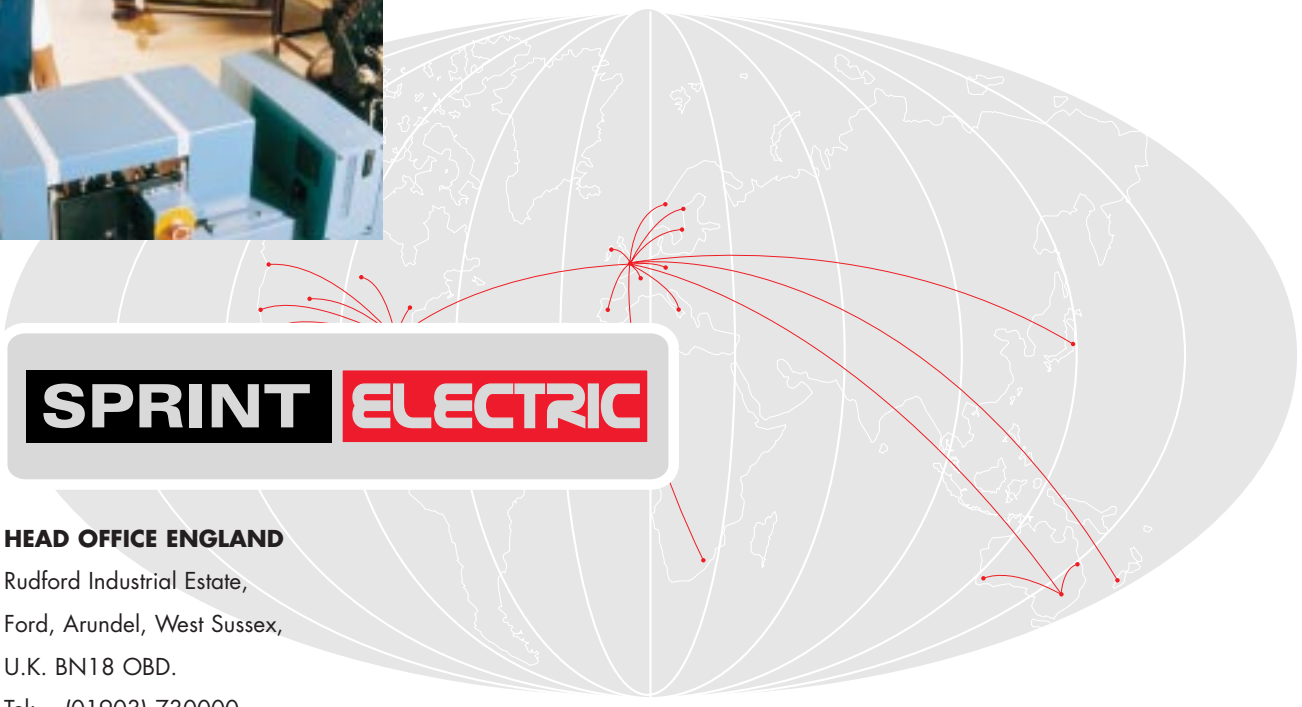

Specialising in the design, manufacture and support of DC variable speed drives the company is focused on providing high performance products with excellent technical specification and reliability.

Founded in 1987, **Sprint Electric's** commitment remains that of providing innovative products backed up by the highest level of customer service to the world-wide industrial market.

Designed and manufactured in the UK, board assembly to ISO9002 utilises the most up to date production technology with automatic component insertion, in-circuit and functional testing.

- Always Dependable
- Instantly Available
- Easily Affordable

Reliably yours

Quality and Reliability

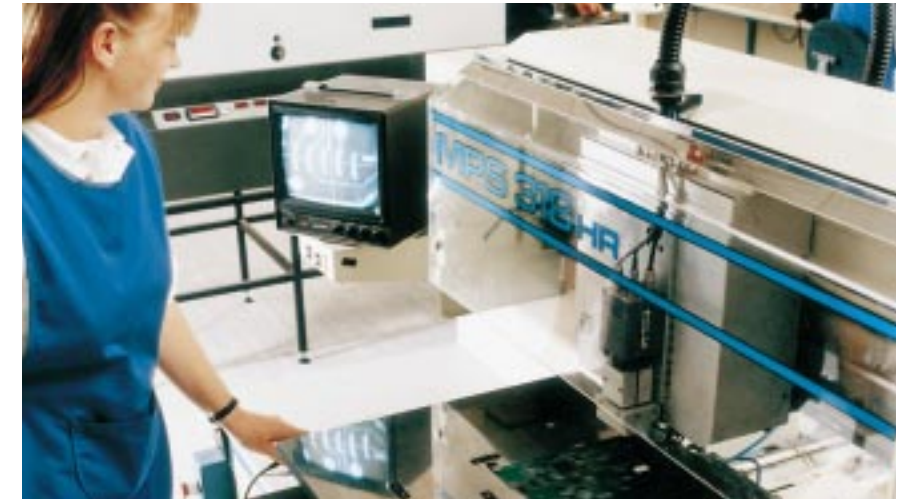

Product availability is another key area where the company is proud of its achievements. In today's fast moving environment, supply is guaranteed by extensive inventory allowing reliable and dependable deliveries.

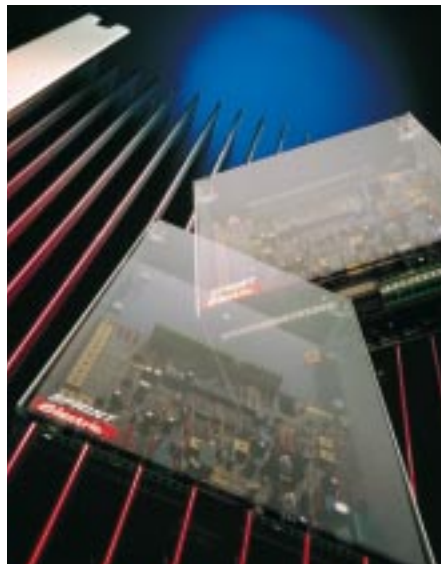

Extensively automated PCB production to ISO9002 standards. The process begins with the latest component insertion production technology with quality backed up by in-circuit "ATE" board testing. Final product assembly is followed by **100% functional testing prior to despatch.**

Quality of design is underpinned by CE, CSA and UL listing.

The latest production technology together with high standards of design and service, has won Sprint Electric a diverse world-wide client base

Extensive Product Range

From a 2 Amp servo performance low voltage controller, to three phase DC thyristor variable speed drives of many hundreds of amps, **Sprint Electric** offers a wider range of DC drives than any other manufacturer. Over 50 models covering both single phase and three phase, regenerative and non-regenerative DC variable speed drives.

Product designs are backed by many years of system experience, and a rigorous approach at the R&D stage brings many user benefits. Highly advanced features are included as

standard in even the lowest power drives, making them ideal for simple single drive installations right through to the most complex multi-drive systems. Features such as International AC supply voltage compatibility, High accuracy AVF, Switch selectable tacho feedback, Integral Field weakener, and all the input and output control signals that any user could want, make **Sprint Electric** products so versatile.

Substantial cost saving can be made since there is inevitably a Sprint product to match your exact needs without the need to over specify.

Through careful design **Sprint Electric** drives are remarkably compact, so further savings in terms of cabinet size, ease of machine installation and wiring are easily achievable. These substantial savings can often outweigh the initial cost of the product itself!

Ease of use is another benefit, product manuals offer step by step start up guidance and contain all the technical detail required. Examples of typical applications are provided making system design quick and trouble free.

Wide Industry Base

From the heaviest and most arduous of industries to precise and performance critical applications:

- Rubber and Plastics**
- Paper**
- Steel**
- Mechanical Handling**
- Textiles**
- Packaging**
- Machine Tools and Printing**

These are just some of the industries which benefit from the reliability and performance of **Sprint Electric** variable speed drives.

Over the years, **Sprint Electric** has developed an ever expanding customer base world-wide. These discriminating customers, repeatedly rely on **Sprint Electric** to meet their increasing demands and are a testimony to Sprint's high standards of service and product quality.

From 50 Watts to 500KW
Sprint Electric has *the drive* to meet your requirements.
